

Biochemistry Crossword

Ms. Loree

EclipseCrossword.com

Across

3. Example of a female steroid sex hormone
9. Monomer molecule for nucleic acids
10. Level of protein structure formed by folding
11. Reaction that releases energy
12. Formula that shows how the atoms that make up the molecule are bonded to one another
13. Compound containing carbon
14. Type of bond that involves a sharing of electrons
15. Means "water-hating"
19. Molecule that makes up plant cell walls
20. Process used to break down a polymer
21. sugar that consists of two monosaccharides

Down

1. Energy-providing molecule of the cell
2. Reaction used to join monomer molecules into polymers
4. Example of a polysaccharide
5. Long-term energy storage molecule in animals
6. Molecules that have a difference in charge between their ends
7. Polymer molecule of proteins
8. Example of a monosaturated fatty acid
16. Bond formed when one atom donates electrons to another
17. Example of a disaccharide
18. Formula showing the number of each type of atom making up a compound
